

CSDA 1050 Sprint 2 ReadMe

August 6, 2019

Nickolas Lal

Sprint 2 contains the modelling/analysis phase of the project and it continues from where Sprint 1 ended. At the start of the project the goal was to try to identify the marginal difference in rent price between tenured renters and new renters in Toronto, specifically looking at apartments. During the completion of the Sprint and project many gaps were identified, and this became increasingly more difficult. The Sprint contains an attempt at forecasting the average apartment rent price in Toronto. This can be very useful for prospective renters, landlords, and the City of Toronto. The code and rationale are in the notebook and the report.
