CSDA 1050 Sprint 2 ReadMe

August 13, 2019

Nickolas Lal

Sprint 2 contains the modelling/analysis phase of the project. In this case the Sprint contains an attempt at forecasting the average apartment rent price in Toronto. This can be very useful for prospective renters, landlords, and the City of Toronto. The code and rationale are in the notebook. A refined and cohesive version of all deliverables including the full written report and video presentation will be submitted at the end of the course.
